

LOUISIANA WEEKLY CLIMATE SUMMARY

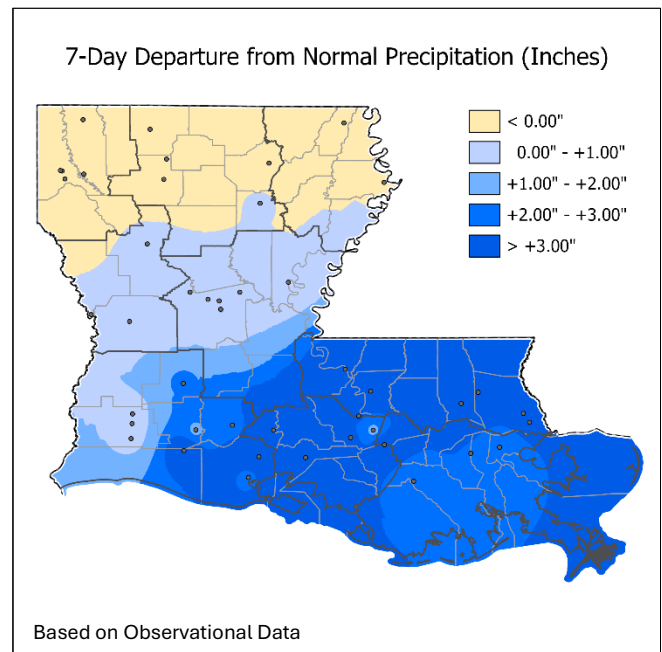

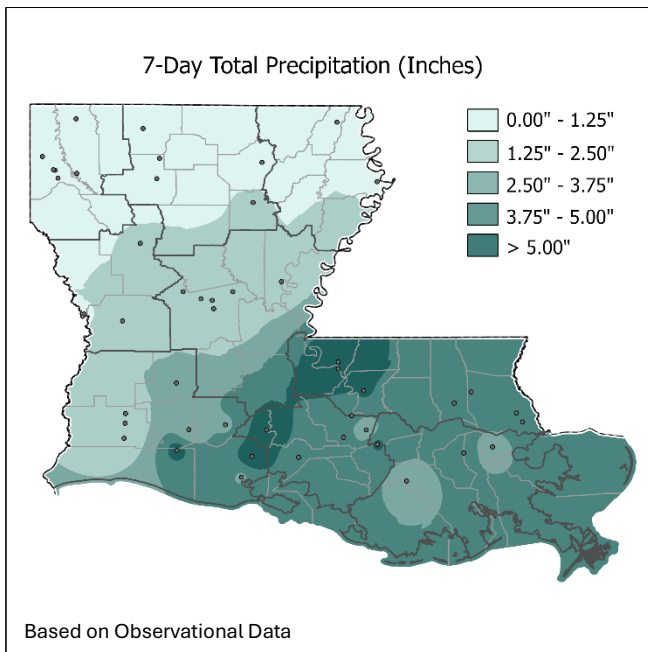

Volume 1, Issue 49

December 03 – December 09, 2025

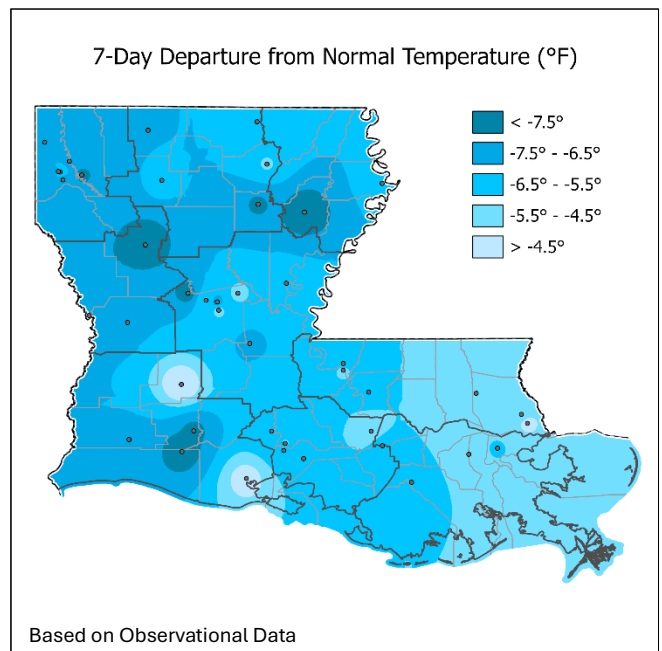

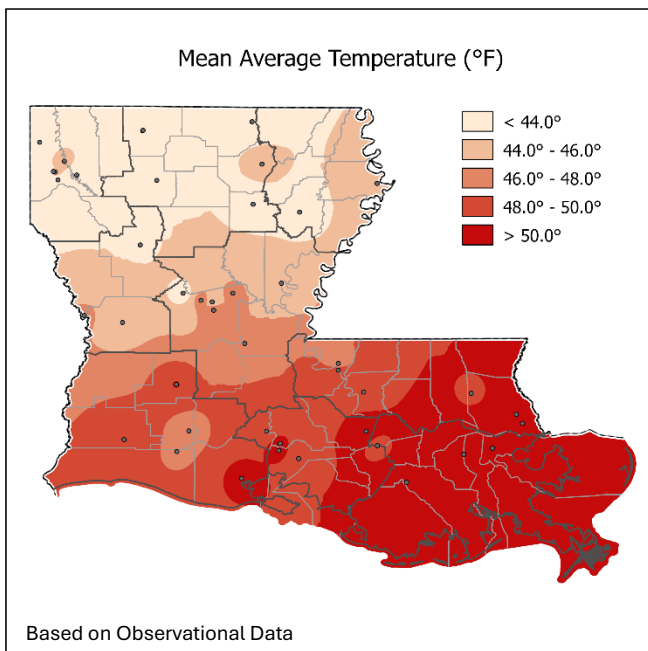

* PROVISIONAL DATA

7-Day Accumulated Rainfall & Average Temperatures: 03 Dec – 09 Dec 2025

- several rounds of precipitation moved through the Bayou State from Dec 3 to Dec 7 in association with low pressure off the Gulf Coast, persistent upper-level southwesterly flow from the Pacific, and a frontal passage on Dec 7
- two NWS Flood Advisories and a Flash Flood Warning were issued on Dec 4 for areas in southern Louisiana in response to some areas receiving several inches of rain in less than 24 hours
- rain totals across southern and central Louisiana were above 7-day normals; by contrast, totals were below-normal for the northern third of the state

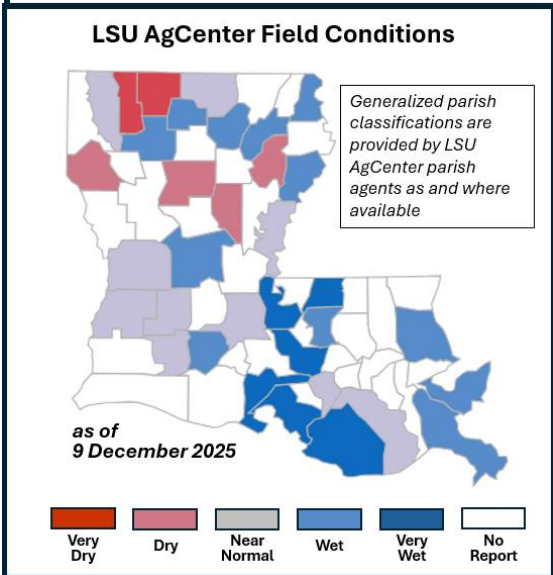

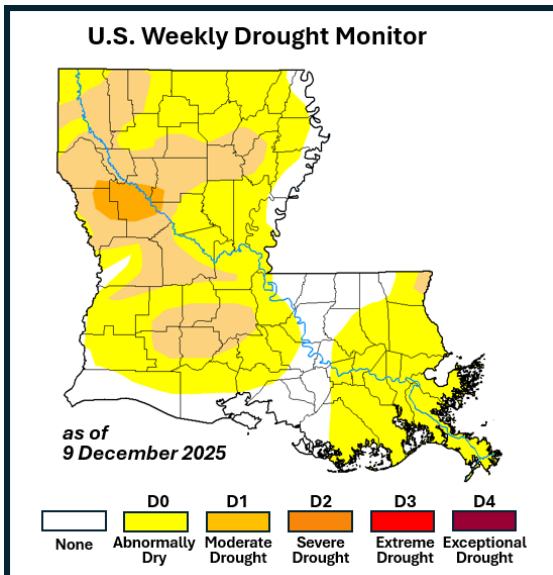

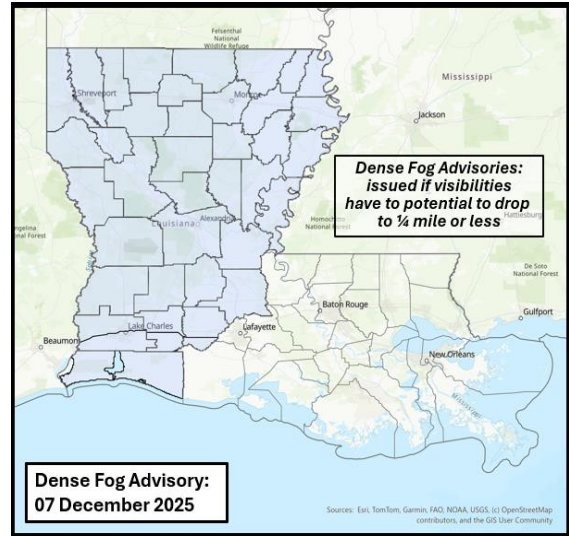

- average temperatures were well below the 7-day normal as the period was dominated by cloud cover and rainfall due to several factors including persistent upper-level southwesterly flow from the Pacific as well as passing low pressure and frontal systems

It is Fog Season for Louisiana:

While fog can be an issue in every part of Louisiana throughout the year, the predominant time for repetitive periods of fog, especially dense fog, is during the ‘cool’ months of the year.

The peak in occurrences runs from December through February but the uptick in frequency really begins in late October to early November. Activity drops off noticeably by late March onto early April.

Fog can develop at any time of day with the proper weather set-up, but it is most common in the early morning hours.

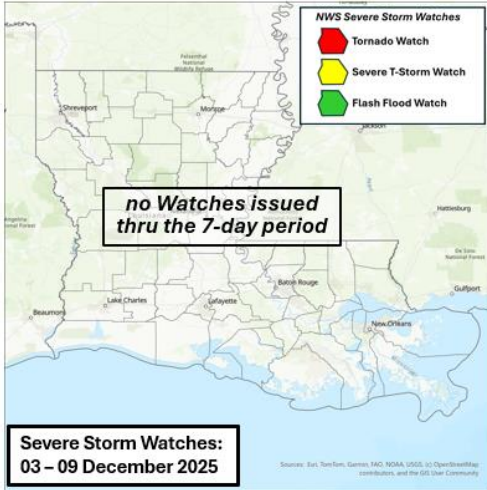

U.S. Drought Monitor: Issued December 11, 2025

- includes data thru December 09

- the Drought Monitor depiction for Louisiana showed a one-category improvement across all of southern Louisiana as well as the far northwestern corner of the state
- with the changes, D2 (‘Severe Drought’) covers just over 2% of the Bayou State compared to 7% for the previous 7 day period, D1 (‘Moderate Drought’) covers 24% compared to 52% for the prior 7 days, and D0 (‘Abnormally Dry’) covers just under 56%
- for the second consecutive 7-day stretch, Louisiana received multiple rounds of precipitation; heaviest rains fell across southern Louisiana (gauge and radar-estimates above 3.00” and in some cases above 6.00”) while most of the northern Louisiana received amounts below the 7-day normal
- with average temperatures running below normal, coupled with considerable cloud-cover, evapotranspiration rates were likely low too
- the rate and number of rounds of precipitation allowed much of what fell to soak into the soil and improve soil moisture conditions, particularly across southern Louisiana
- LSU AgCenter agents noted “Near Normal” field conditions across 10 parishes, “Wet” conditions across 12 parishes and “Very Wet” conditions across another 6 parishes
- compared to the prior 7-day period, LSU AgCenter agents noted that field conditions “Significantly Improved” across 5 parishes, and “Slightly Improved” across 12
- all burn bans within the state have been lifted

Severe Weather:

No Watches were issued in Louisiana by the NWS during the 7-day period, and there were no reports of strong storms generating localized weather impacts. However, localized downpours were recorded on Dec 4 over a number of southern parishes, prompting the Lake Charles NWS office to post a Flash Flood Warning across a large section of Acadiana. The NWS Office in Slidell also issued a pair of Flash Flood Advisories for portions of southeast Louisiana on the same day.

Tornado Reports: 03 - 09 December 2025

EF Rating	Date	Time	Parish(es)	Peak Winds (mph)	Path Length (mi)	Path Width (yds)	Fatalities Injuries	Prop Dmg
no NWS confirmed tornado reports at this time								

Prop Dmg: Building and/or Residential Property Damage

Divisional and Statewide Summary: 03 Dec - 09 Dec 2025

T - Temperature (°F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

Precipitation and temperature data are primarily retrieved through the ACIS QueryBuilder (rcc-acis.org) and the cli-MATE platform (MRCC Application Tools Environment), both of which are maintained by the NOAA Regional Climate Centers (RCCs).

Drought data are sourced from the U.S. Drought Monitor (unl.edu), the LSU AgCenter, and the Louisiana Dept. of Agriculture & Forestry.
