

LOUISIANA WEEKLY CLIMATE SUMMARY

Volume 1, Issue 41

October 08 – October 14, 2025

Daily Ranges

- Max/ Min Temps
- Max/ Min Normal

Daily Extremes

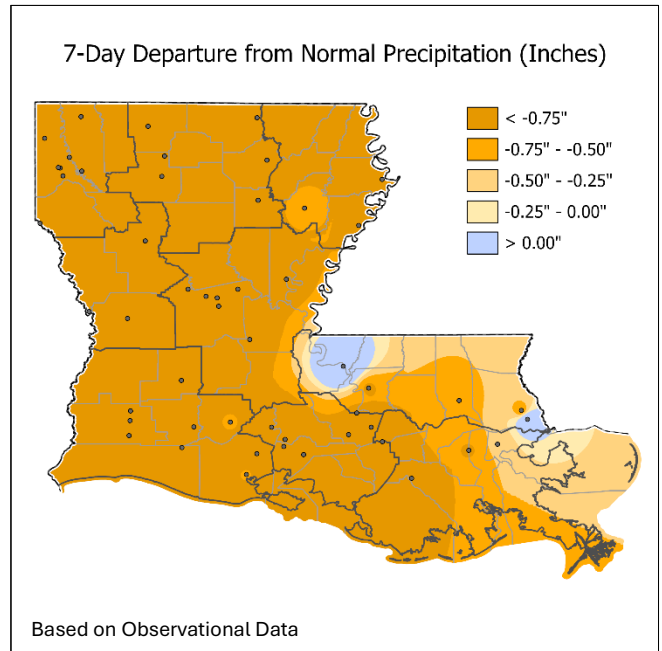

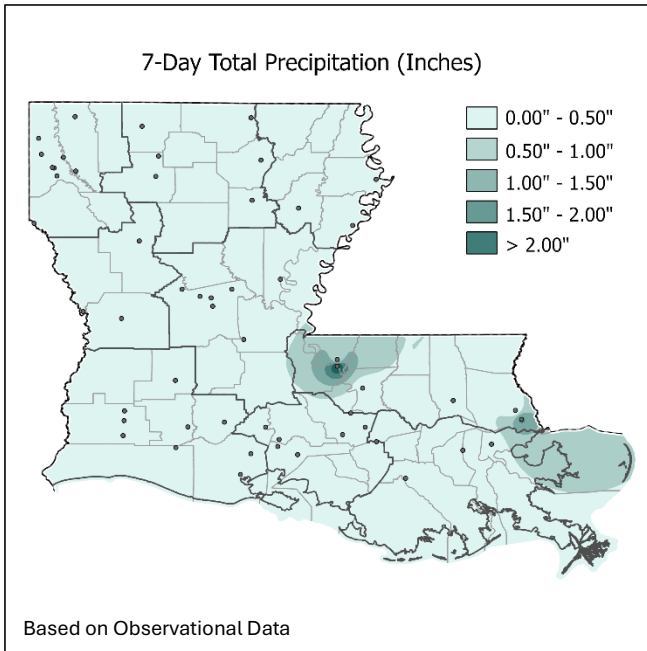

- Record High Max
- Record High Min
- Record Low Max
- Record Low Min

Rainfall

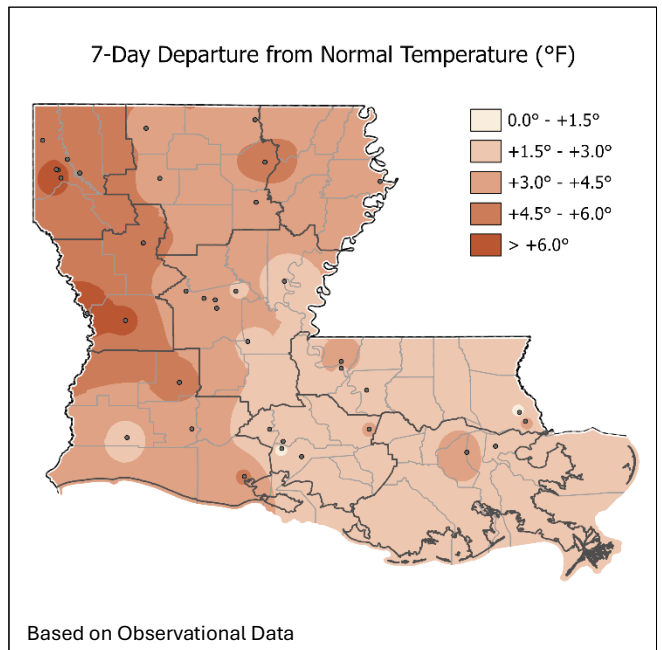

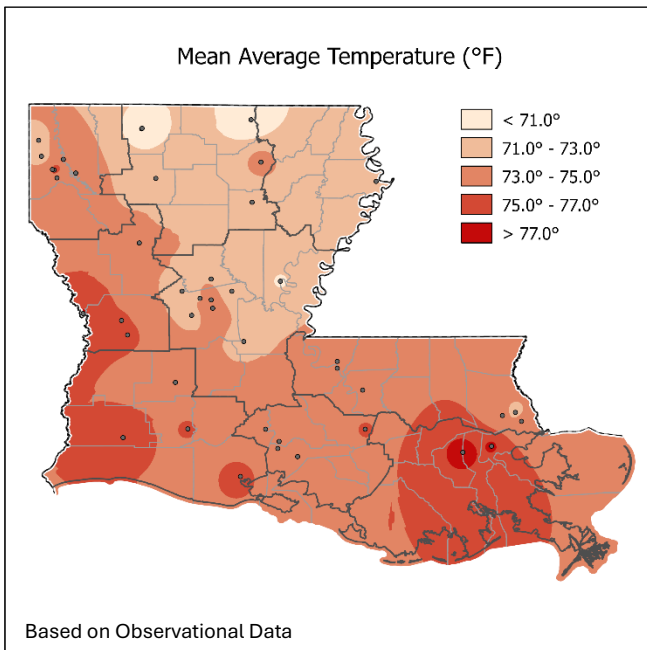

* PROVISIONAL DATA

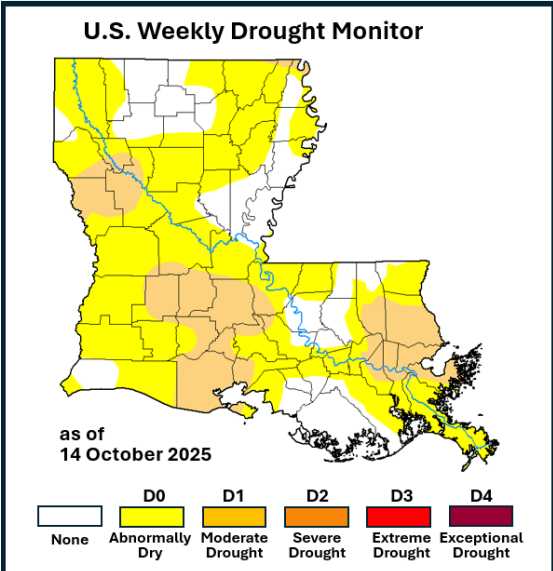

7-Day Accumulated Rainfall & Average Temperatures: 08 – 14 October 2025

- what little rain that did fall during the 7-day period was associated with a frontal passage on October 8th
- rainfall was not only below the 7-day normal for almost all locations, but a majority of Louisiana sites were rain-free for the period

- the state's trend of warmer-than-normal weather continued through the period; daily high temperatures were generally above normal statewide for all 7 days, even with the October 8th 'cold' front

U.S. Drought Monitor: Issued October 16, 2025
- includes data thru October 14

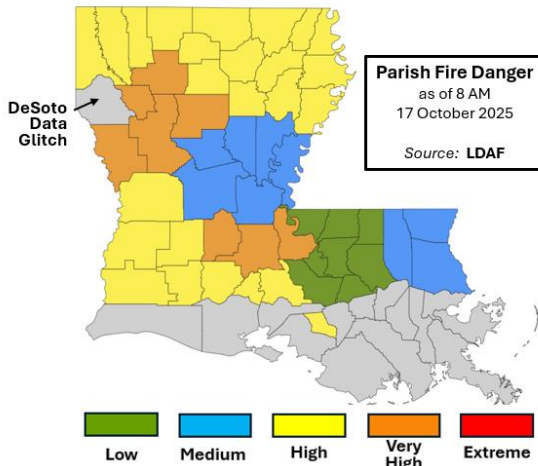

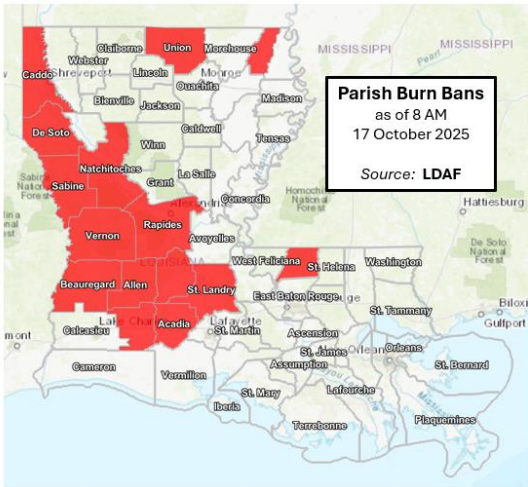

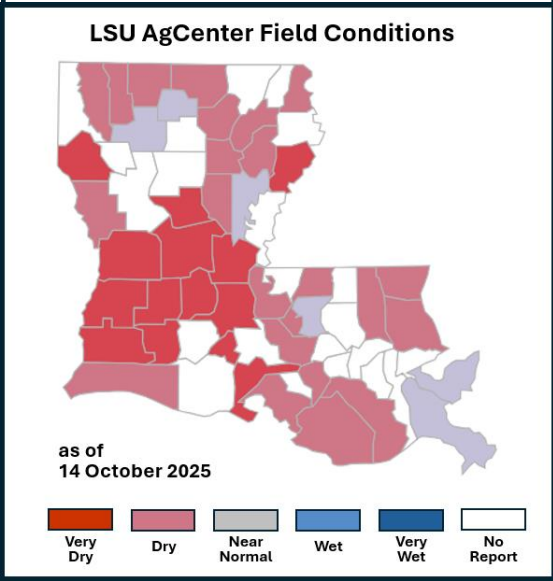

The Louisiana Drought Team, in coordination with national USDM authors, increased the coverage of D1 ('Moderate Drought') across west-central and south-central Louisiana. In addition, D0 ('Abnormally Dry') coverage was increased across all portions of Louisiana.

Statewide coverage of D1 increased from 16% to 21% while the statewide coverage of D0 increased from 40% to 55%. Just over three quarters of the state is designated as D0 or D1, the most since 10/29/2024.

The only rain during the 7-day period occurred as a result of a front that eventually cleared the state on the 8th. Following its passage, humidities decreased significantly but average temperatures remained above normal. These factors, coupled with limited cloud cover, allowed for elevated evapotranspiration (ET) for the period, adding to the dry-out and drought expansion in the state.

Of the 43 parish reports received, LSU AgCenter agents noted "Very Dry" field conditions across 14 parishes and "Dry" conditions for another 23 parishes. Impacts were noted for crops, forestry, pastures, and surface water.

Due to the dry conditions and the imminent wildfire threat, 15 parishes had burn bans in effect as of October 17th. Also as of the 17th, Fire Danger levels were posted as "Very High" for 8 parishes, and "High" for an additional 24 parishes.

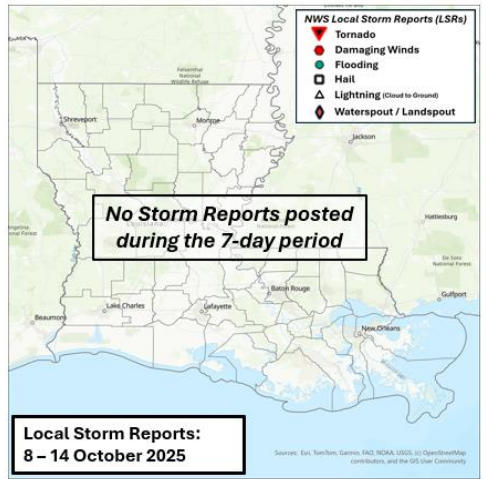

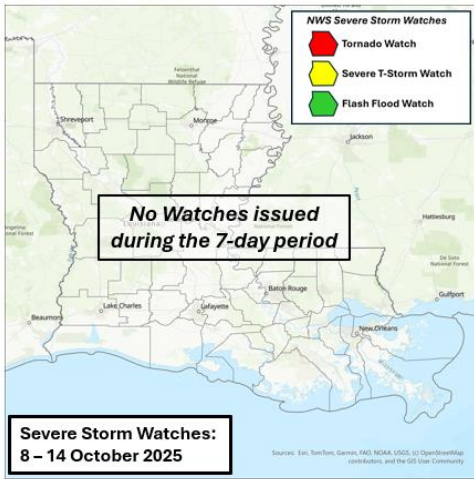

Parish **Burn Bans** are issued and lifted by local designated agencies and/or officials.

Daily Fire Danger maps are produced by the USDA Forest Service, the Nat'l Interagency Fire Center (NIFC) & the LDAF.

Severe Weather:

No Watches or Warnings were issued in Louisiana by the NWS during the 7-day period, and there were no isolated strong storms to generate localized weather impacts.

Tornado Reports: 8 - 14 Oct 2025

EF Rating	Date	Time	Parish(es)	Peak Winds (mph)	Path Length (mi)	Path Width (yds)	Fatalities Injuries	Prop Dmg
no NWS confirmed tornado reports at this time								

Prop Dmg: Property Damage

T - Temperature (⁰F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

Precipitation and temperature data are primarily retrieved through the ACIS QueryBuilder (rcc-acis.org) and the cli-MATE platform (MRCC Application Tools Environment), both of which are maintained by the NOAA Regional Climate Centers (RCCs).

Drought data are sourced from the U.S. Drought Monitor (unl.edu), the LSU AgCenter, and the Louisiana Dept. of Agriculture & Forestry.
