

# LOUISIANA WEEKLY CLIMATE SUMMARY

Volume 1, Issue 51

December 17 – December 23, 2025

**Daily Ranges**

- Max/ Min Temps
- Max/ Min Normal

**Daily Extremes**

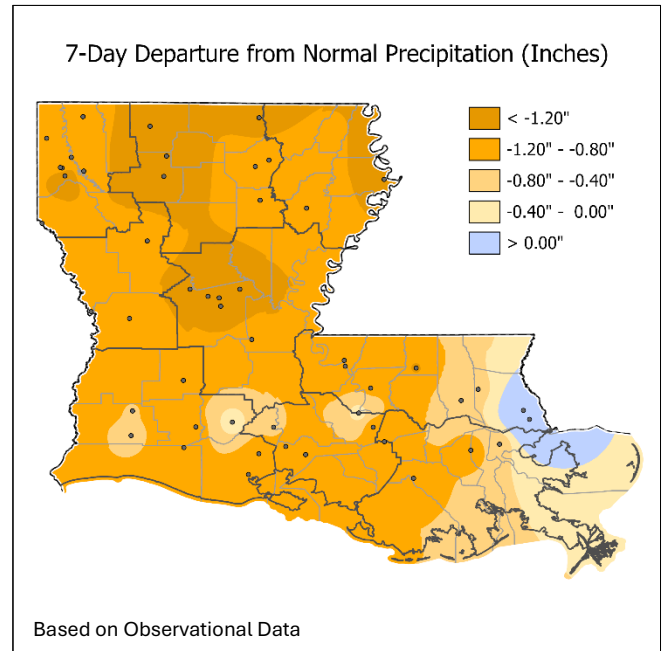

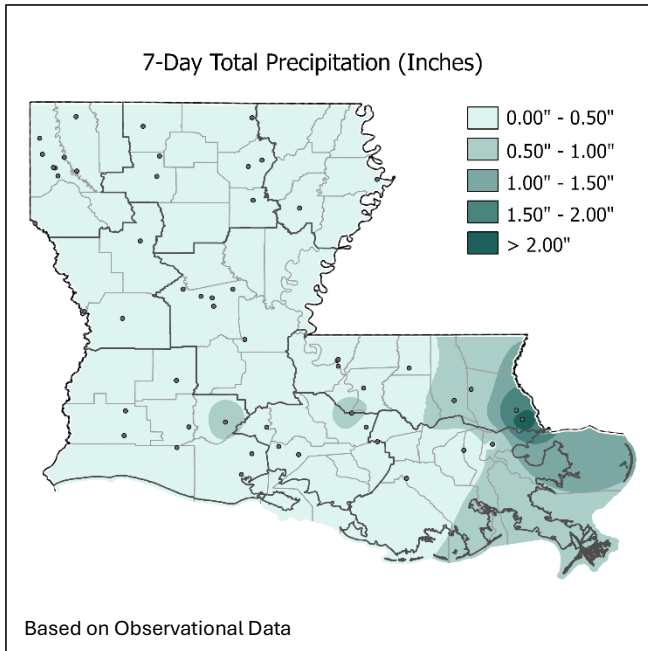

- Record High Max
- Record High Min
- Record Low Max
- Record Low Min

**Rainfall**

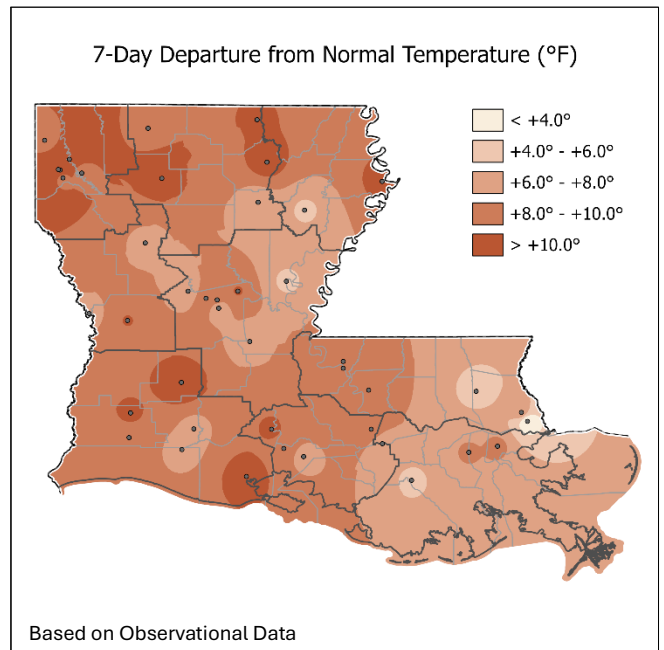

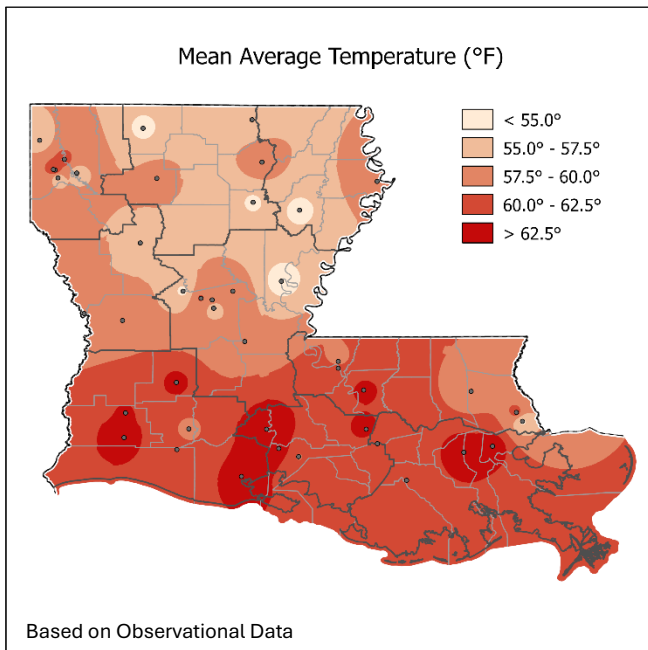

\* PROVISIONAL DATA

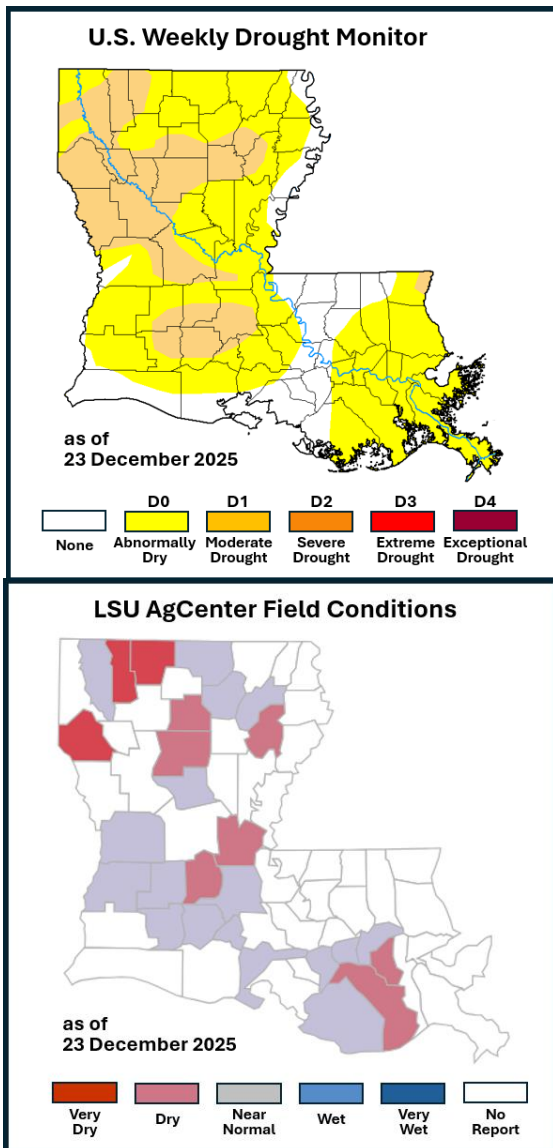

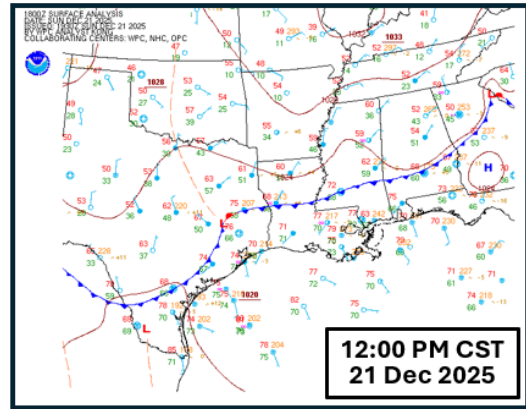

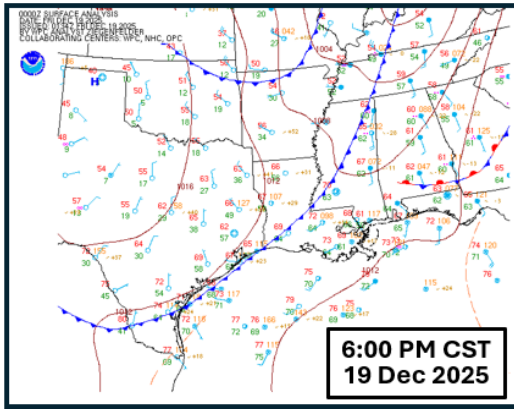

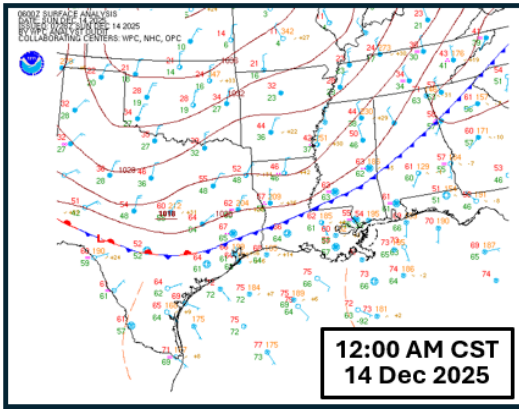

## 7-Day Accumulated Rainfall & Average Temperatures: 17 Dec – 23 Dec 2025

- 7-day rain totals were generally below-normal for all but the Slidell area (EC Div), with only 6 sites in the state reporting 1.00" or more for the period, in spite of three cold front passages (p. 3)

- 7-day average temperatures were well-above-normal as the Bayou State was under the influence of southerly flow for the majority of the period with surface high pressure frequently positioned to the east of the state
- Even with the "warmth," portions of northern Louisiana did report a freeze on the morning of Dec 19
- several daily maximum and "high minimum" temperature records were tied or broken during the period

### U.S. Drought Monitor: Issued December 24, 2025

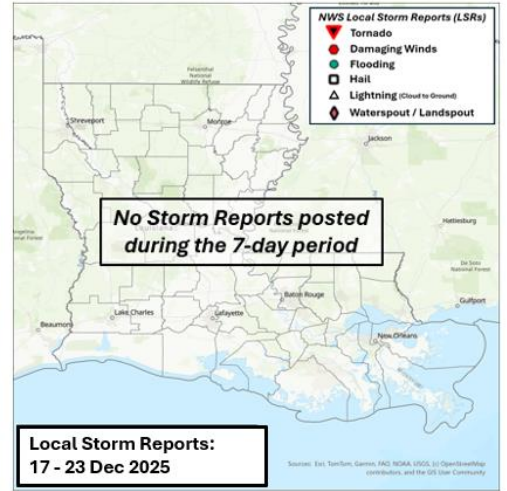

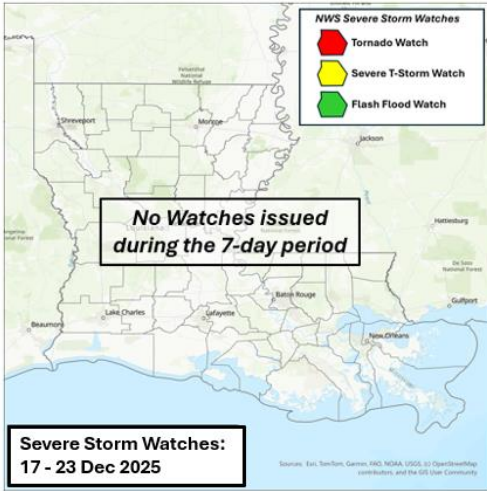

- includes data thru December 22

- there was no change to the Drought Monitor depiction for Louisiana except for a slight expansion of D1 in western Sabine parish
- D1 ('Moderate Drought') now covers 25% of Louisiana with D0 ('Abnormally Dry') extending over an additional 57%
- the limited precipitation and "warm" temperature regimes for this time of year certainly added to the seasonal dryness but were not deemed critical enough for the LA Drought Team to implement widespread drought degradations
- of the reports received, LSU AgCenter agents noted "Very Dry" field conditions across 3 parishes, "Dry" conditions across 7 parishes, but "Near Normal" conditions for nearly one-fourth of the state
- compared to the prior 7-day period, LSU AgCenter agents noted that field conditions "Slightly Degraded" across 2 parishes, "Slightly Improved" across 3 parishes, and "No Substantial Change" elsewhere

Drought conditions continue to impact a considerable portion of Louisiana and such conditions are typically accompanied by an elevated threat for wildfires. Fortunately, however, the LA Dept. of Ag & Forestry is currently indicating a slight reduction in wild fire threats around the state with no burn bans currently in effect (as of 23 December 2025).

**Severe Weather:**

No Watches or Warnings were issued in Louisiana by the NWS during the 7-day period, and there were no reports of strong storms generating localized weather impacts.

**Tornado Reports: 17 – 23 December 2025**

EF Rating	Date	Time	Parish(es)	Peak Winds (mph)	Path Length (mi)	Path Width (yds)	Fatalities Injuries	Prop Dmg
<b>no NWS confirmed tornado reports at this time</b>								

Prop Dmg: Building and/or Residential Property Damage

**Divisional and Statewide Summary: 17 – 23 Dec 2025**

T - Temperature (°F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

**Precipitation and temperature data are primarily retrieved through the ACIS QueryBuilder ([rcc-acis.org](http://rcc-acis.org)) and the cli-MATE platform (MRCC Application Tools Environment), both of which are maintained by the NOAA Regional Climate Centers (RCCs).**

**Drought data are sourced from the U.S. Drought Monitor ([unl.edu](http://unl.edu)), the LSU AgCenter, and the Louisiana Dept. of Agriculture & Forestry.**
